Refinoc Biowaste Management Foundation
INTERNAL DOSSIER: #000 "BACKGROUND"

SUBJECT: Our Purpose (Facility - [redacted])

LOCATION: Denver, Colorado, [redacted]

Refinoc Biowaste Management is responsible for all research into potental disposal of waste and the recycling. We would like to assure all people of the quality of our water recycling process and its resulting purity. Join us today! Ensure the health of America! Call [redacted]

TOP SECRET // TOP SECRET // TOP SECRET // TOP SECRET // TOP SECRET

SUBJECT: The Left-Hand Parasite

It is unknown when, how, or where the first Left-Hand infected host was discovered; however, their presence has been closely monitored and controlled by a number of government agencies and DARPA-sponsored corporations. This has naturally led our work to the study, experimentation, and weaponization of the parasite.

The parasite exclusively targets young female human subjects, attaching to the base of their spinal cord. Once the host has reached the ages of 13-15 the parasite will activate quickly, inducing a number of unknown biological changes. These changes render the host sterile, result in the atrophy of all non-vital biological systems, and most significantly, result in the complete ego death of the host. Allowing the parasite to 'consume' and nearly perfectly imitate the host's personality, including any memories and skills they possessed. This process often causes the host to become violent and typically results in incidents of murderous outrage while the parasite assumes control. This murderous tendency remains in place; however, it appears possible to suppress this tendency, at least temporarily.

Notably, the host is known to develop a form of telekinetic ability as a result of the brain being 'converted' into a new type of organ for the parasite's use. This reconstitution of the brain allows the parasite to somehow manipulate reality in a short area around its body. The strength of this 'telekinetic' ability appears to be unmeasurableby the biology of the host alone. Further research is required on this subject. Due to innate biological differences between human males and females, the parasite is incompatible with male biology. Rather than overtaking the male host, the parasite will use the body as a reproductive hub until the host expries, releasing new parasites from the corpse.

Refinoc Biowaste Management Foundation
INTERNAL MEMO TO THE DIRECTOR

SUBJECT ID#: 14

CODE NAME: Ω3

STATUS: UNKNOWN

//Due to recent events during the destruction of facility [redacted]. Current status and location of subject is unknown. All recovered internal database files have been discovered to be corrupted.
I have traveled through all potental options before pushing this corrispondance to you. We request access to the master database to restore this facility's records. The following is all file information we could recover on the subject. If there is any errors please correct below.//
-FROM THE DESK OF FACILITY OVERSEER [redacted] OF FACILITY [redacted].

ORIGIN:

UNAFFILIATED (//*CODE: DROP-IN*//): The subject was recently discovered fleeing from the facility before its destruction. Their current identity is unknown, and no conclusive evidence has been gathered of any potential involvement. The investigation is postponed until further light is shed on the subject. However, as procedure demands, even I must ask you to provide any information you may possess in an unlikely circumstance. I apologize for any inconvenience. Director.

EMPLOYEE (//*CODE: Researcher/Staff/Government Liaison*//):
The subject was under a known contract with one or more of our facilities. Unfortunately, due to the loss of the facility and neglect resulting in internal hiring failures, all records of this employee have been lost. Please note below their former status.

LEFT-HAND PARASITE (//*CODE: Left Hand Host*): The subject was one of many other Left-Hands which breached containment on the night of the facility's destruction. Left-Hand #034, Left-Hand #73, and Left-Hand #55 were recaptured following the deaths of 2 security squads due to #034's Scatter Protocol, while #73 and #55 succumbed to the failsafe activation. The recapture of the subject is a matter of national security; numerous governmental and military branches have been informed of #14's breach. Deployment ETA: immediate.

SUBJECT Ω3-14 IS SUSPECTED TO POSSESS "1000DP" *//DESIGN POINTS//*

Refinoc Biowaste Management Foundation
INTERNAL DOSSIER: #001 "ABILITIES"

SUBJECT: UNAFFILIATED

Resilient (-100DP): The subject has been noted to possess an unusually high tolerance for physical trauma. The nominal healing time expected from usual subjects was exceeded by 200%. Additionally, all experimentation has shown little to no scar tissue or lasting damage to any vital organs. Further study has been planned.

Mental Fortress (-200DP): The subject has dealt with all experiments remarkably well. Showing little to no mental trauma in even the most horrific circumstances. Any mental trauma that has occurred, such as PTSD, MDD, etc., has been reduced, if not vanished, by a week's period.

Irresistable (-400DP): A strange phenomenon has been observed even within the staff's own ranks. Remarkably, the subject has garnered the 'Affection' of numerous staff members, notably the most unstable of them. Viewing through the past history of the subject and interviews has shown that this strange "attraction" factor has been noted in a majority of unstable, if not psychopathic, women. //What the hell is this Dr. [redacted]? This is completely irrelevant! Remove this in the next printing!//

Parasite Immunity (-800DP): The most noticeable aspect of the subject by far It appears that the subject is completely immune to the Left-Hand parasite; furthermore, this immunity has spread to cover all known parasitic invasions of the body. Upon recapture, DNA cloning and study are priority #1.

SUBJECT: EMPLOYEE

Security Op (-100DP): The subject was a highly trained PMC operative outsourced to our facility. From previous records, it appears they were masterclass marksmen and held previous military training.

Black Ops Operative (-200DP): The subject was supposedly a head of our many privatized "Security Teams". Notabily they appear to have been in charge of coverup operations. From previous remaining reports they supposedly almost never left a witness and were a top of the line undercover agent with all that entails. //Perhaps they have gone into hiding?//

Researcher/Facility Overseer (-400DP): The subject appears to have been one of our head researchers. Their subject of study is unknown, please write their subject of study below director. however it is known they were considered a world class genius in their subject. Additionally as per their work they undoubtably possessed a great deal of influence even without our foundation.

Director (-800DP): ...Director? My apologies how could we make this mistake? Well for posterity... The subject is the Director of the Refinoc Biowaste Management Foundation. They are known to possess incredibile management skills. Naturally as the head of our entire operation the subject possesses all classified knowledge... even those that would be redacted from our operation to even those of other related government organizations due to our close cooperation with them. But you already know that... right Director [redacted]?

[redacted]

Refinoc Biowaste Management Foundation
INTERNAL DOSSIER: #001A "ABILITIES"

SUBJECT: LEFT HAND PARASITE

Left Hand Physiology (FREE AND REQUIRED BY LEFT HAND PARASITE, -100DP): Subject possesses all known traits and aspects typical to that of a Left Hand Host. Including the female sex, biological steralization, and complete mental userpation by the parasite. Parasite has completed the conversion of the brain tissue to the unknown telepathic organ whilst replicating previous mental functions in the parasitic worm located at the basis of their spine. Mental changes are typical with violent outbursts, and stunted empathy towards humans. Parasite has granted it's usual regenerative ability and increased biological durability to physical trauma. Subject is otherwise unremarkable.

Matter Distortion (Variable, HIGHER CLASSES REQUIRE PREVIOUS CLASSES):

Class 0 (FREE FOR LEFT HAND PARASITE, -100DP): Subject's 'Telekinetic' ability granted by the parasite appears to be nigh-nonexistant. Only through extensive observation has it been found the subject able to manipulate matter within only an inch of their body with barely enough force to lift 10lb of weight.

Class 1 (-400DP): Distortion ability observed in the subject is nominal. Distortion field appears to extend within a 5ft radius of the host. highest weight manipulation measured, 50lbs. Molecular vibrations sub-iron melting point.

Class 2 (-800DP): Remarkable distortion ability, double all previous measures. Subject upon recapture is to be refitted with a new Failsafe device to ensure compliance.

Class 3(-1600DP): This cannot be correct... Subject exceeds 4x previous measurements. Recapture considered impossible. Recommendation: Extermination.

Scatter Protocol (-400DP, REQUIRES MATTER DISTORTION): Subject appears to have mastered the technique known as "Scatter Protocol". All armed personnel are advised to hold fire against subject. Automatic firearms testing have shown the subject able to reflect approximately 100 round/s at maximum. Direction of discharged rounds appears to be chosen by the subject. //See incident #21-A and #45-C for examples of lethal and less than lethal useage by parasite hosts. Failsafe renders protocol ineffective as usual. Distortion class appears to modify rate of reflection. Class 1 appearing to handle 200R/s, and Class 2 400R/s before being overwhelmed.//

Molecular Regeneration (-800DP, REQUIRES MATTER DISTORTION): Subject displays incredible regenerative ability compared to other hosts. Subject has managed to recover from complete dismemberment, organ removal //Excluding the parasite itself of course//, desangination, and extensive physical trauma. It is expected the only method of extermination that would remain effectual is complete disintigration, and incineration. //Speed appears to be determinate on Subject's Distortion Ability. Class 0 taking upward of a week to regenerate limbs, Class 1 undergoing full body regeneration in a manner of hours, and class 2 taking mere minutes or less.//

Refinoc Biowaste Management Foundation
INTERNAL DOSSIER: #001B "ABILITIES"

SUBJECT: LEFT HAND PARASITE (CONT.)

Dimensional Splice (-2000DP): //**CLASSIFIED: DIRECTOR EYES ONLY**// As we feared subject displays the ability to transfer between dimensions, and complete material obliteration within distortion field. Information transferance between dimensions before their destruction has revealed this process to render the previous dimension completely obliterated. Host appears unable to travel to "distant alternative universes" and it is theoretically possible to "Trap" the host in a dimension should all alternative routes be pruned. God help us all. //**CLASSIFIED: DIRECTOR EYES ONLY**//

Refinoc Biowaste Management Foundation
INTERNAL DOSSIER: #002 "ITEMS"

SUBJECT: UNAFFILIATED

School Clothes (-100DP): Subject was last seen wearing a typically high school outfit. Which school the subject supposedly attends is currently unknown. further CCTV footage is under scrutiny.
"Cool Sunglasses" (-200DP): A set of completely unremarkable sunglasses subject wore on the day of the incident. Each lens is tinted orange and is predictively reflective.
Car (-400DP): Subject was observed fleeing the scene in a Ford Explorer. Unfortunately due to faulty CCTV footage the exact model and plate number was unobserved.
Hill-Side Manor (-800DP): Previous interviews have revealed subject to own a relatively opulent place of abode somewhere within the state. Any exact specifications and address of the household is unknown due to the failure to complete interview before the breakout incident.

SUBJECT: EMPLOYEE

Security Team (-100DP): Subject is head of one of our local PMC security teams. Each member is highly trained in marksmanship and tactics. As their leader they are expected to maintain the order and prevent any potential breaches of containment if possible.
Black Ops Cell (-200DP): One of our many black operative cells embedded within the state. Subject is granted authority and command over all undercover operations of the team. Each member is trained in deep infiltration, coverups, and holds influence within local governments.
Left Hand 'Failsafe' (-400DP): A critical piece of equipment in our operations. This implant when installed upon the Parasite Host's brain allows for the quick incapacitation if not death of the subject when the killcode is received via radio frequencies. Renders higher telekinetic abilities under control. Notibly activation appears to 'Restore' the previous host's consciousness for a short period of time if subject does not expire.
Refinoc Biowaste Management Facility (-800DP) - Subject is the designated as facility overseer of one of our local bases of operation in the state of Colorado. as Overseer subject was granted access to all departments, facilities, and research materials including illegal substances. human test subjects, and a host of 5 Left-Hand Infected Hosts for experimentation. Subject is expected to provide research information to the director's desk, lest they face... termination.

SUBJECT: LEFT HAND PARASITE

Rabbit Puppet (-100DP): A simple hand puppet resembling a rabbit which was provided to the subject during their containment. Subject has named it "Ponder".
Chains (-200DP): Subject appears to be embedded with a series of chains within their back. Chains do not appear to hamper subject's movement and furthermore perhaps to due to familiarity of use

SUBJECT: LEFT HAND PARASITE (CONT.)

subject appears to be skilled in using their chains as their medium of matter distortion. Perhaps due to their constant use the chains appear practically unbreakable by any conventional method whilst under subject's influence.

Blood Halo (-400DP): Subject has displaced a strange mutation of the human body, when undergoing destruction experimentation subject appears to have completely regenerated from nearly base matter. The resulting reconstruction appears to be inperfect leaving the subject with a set of malformed wings and a blood halo constantly rotating above their head. The function of this halo appears to take the place of the lungs and is notibly more efficent allowing for the oxination of the blood stream at an approximated 200% efficiency.

Parasitic Fertility (-800DP): Upon X-Ray analysis Subject has shown to host to an unusual amount of offspring hidden within their body. Currently all left-hand parasites within appear to be dorment however it is suspected that subject could potentially infect others with parasites within at their leisure. It is currently known how such "Implantation" would function. Future experimentation has been scheduled.

Refinoc Biowaste Management Foundation
INTERNAL DOSSIER: #003 "DRAWBACKS"

SUBJECT: GENERAL

Cross-Over (+0DP): It appears progress in the "Internecion Cube" initiative has been a success. Further details can be seen in report #A-521.

SUBJECT: UNAFFILIATED

Amnesiac (+100DP): Subject's mind has formed a complete mental block. All methods of coping and memory retrival have proven unsuccessful. Fortunately it appears such block is waning with time. //At this rate its going to take a decade to wear off.//

Psychopathic (+200DP): Subject has shown typically traits of most psychopathic tendencies. Incliding a complete lack of empathy, and extreme tendencies towards cruelty. Further study unnecessary.

Vicker's Syndrome (+400DP): Subject appears to be under the constant affections of the afformentioned mentally unstable suitoresses... Even I.. uh //THATS ENOUGH DR. [redacted] REPORT FOR RETRAINING IMMEDIATELY!//

Infected (+800DP): Subject appears to be host to a inactive Left-Hand Parasite. It is unknown exactly when the parasite will activate, however teams are at the ready for any incident that will inevitably take place upon their activation from dormancy.

SUBJECT: EMPLOYEE

Red Tape (+100DP): Upon internal investigation Subject has reported to be hasseled with multiple points of resistance within our organization and even others. The exact point of this resistance within our facilities is unknown, further investigation is required.

Unlucky (+200DP): Subject has proven to be tendency to a nearly supernatural string of bad luck. It is recommended that subject be held from operations of importance. Not due to any baseless rumor of bad luck, but rather their demoralizing effect on other personnel.

Hubris (+400DP): Subject has known narcissistic tendencies bordering on a God complex. All actions of subject are to be subjected to committe of their peers due to their tendency to underestimate potential threats and points of failure.

Red Shirt (+800DP): The Subject has been noted to be particularly injury prone. Informally staff have placed bets on the next potential incident the subject will be involved with. Please see section #146-C for all reported incidents involving the subject.

SUBJECT: LEFT HAND PARASITE

Left Handed (REQUIRED FOR LEFT HAND PARASITES): Subject is prone to typical murderous tendencies. Subject's empathy has been notibly stunted, and all known urges of the parasite have completely emerged within the host, leading to it's desire to spread it's condition.

[redacted]

Refinoc Biowaste Management Foundation
INTERNAL DOSSIER: #003A "DRAWBACKS"

SUBJECT: LEFT HAND PARASITE (CONT.)

Obsessed (+100DP): Subject appears to have fallen victim to a looping thought pattern during the parasite's activation period. Unfortunately there is no known way to undo this obsession but it can be tempered.

Paralyzed (+200DP): Subject was rendered crippled in order to experiment subject's reliance on their telekinetic abilities. Results are inconclusive, though it appears the parasite is unable or unwilling to repair the spinal coord. Perhaps it sees it as 'Unneeded'?

Hunted (+400DP): Following subject's disapperance, maximum effort has been spared into locating and returning the subject back to our care. //We only need the word director//

Non-Empathetic Resonance (+400DP): Subject appears to have been sufficiently mutated from the base parasite to induce no Empathetic Resonance in other Left-Hands. As a result this specimen is particularly vulnerable to other parasites.

WMD (+800DP): Subject through application of drugs, mental conditioning, and intensive failsafe implantation has successfully been decieved into believing themselves a living weapon of mass destruction. Killcode is of course held at a deadman's trigger by it's handler's should anything befall them.
