

Generic BioTech Post-Apocalypse Jump

Update 0.1

Welcome Jumper, to Earth, but not the Earth you're familiar with. The humans of this Earth were able to bridge the gap between Technology and Biology by creating a device that fuses to a person's brain and allows the user to not only absorb Technology into themselves and manipulate that Technology, but also completely rewrite the user's DNA in any way possible, granting them a form of Biological Immortality.

Several years after the creation of this device, it had become common for most governments to equip their military with them as well. Due to a series of escalating events, the entire world is now at war with each other. Almost every Soldier on the battlefield has been fused with one of these devices and those who haven't are dying in the thousands every couple of days.

It has been several years since the start of the war and the world has ended, all natural life is either dead or has been converted into a Techno-Organic organism, and all the surviving humans are scattered and living in isolated settlements.

You are being sent to this world of
Techno-Organic flora and fauna for 10 years.

The blade of the axe is made up of a strange, seemingly indestructible, bright orange ceramic like substance that when in physical contact with any material except its own handle, produces extreme amounts of heat, enough heat in fact that with the slightest touch a 3 inch thick piece of Titanium is immediately turned into molten slag.
